

Whole blood Inflammation Assay

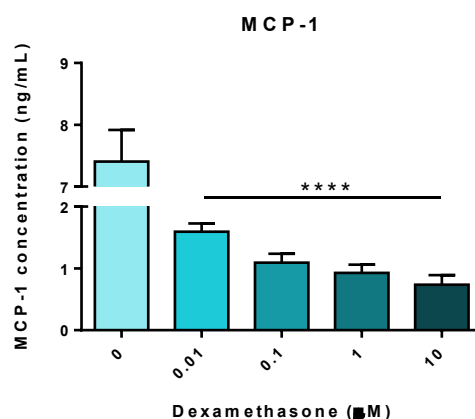

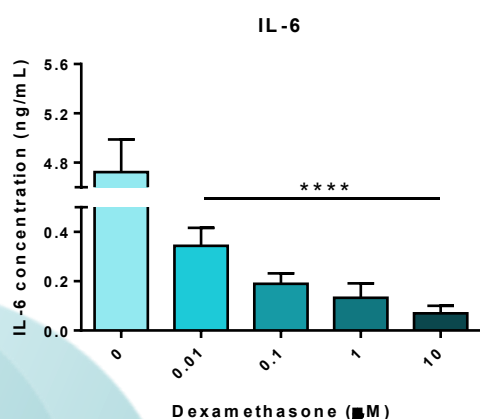

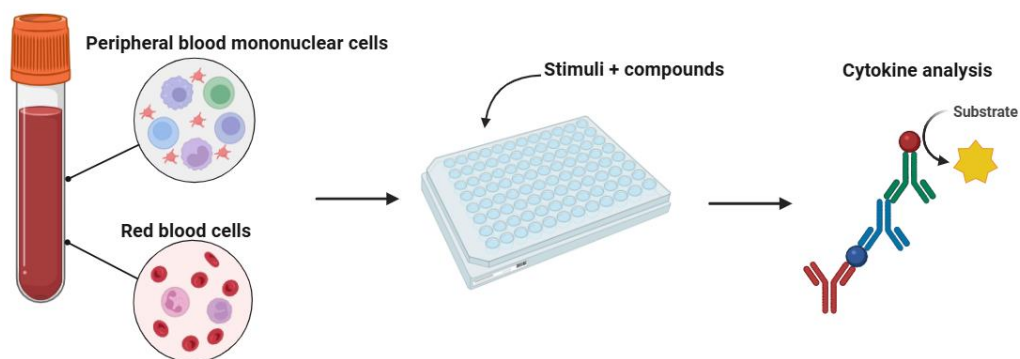

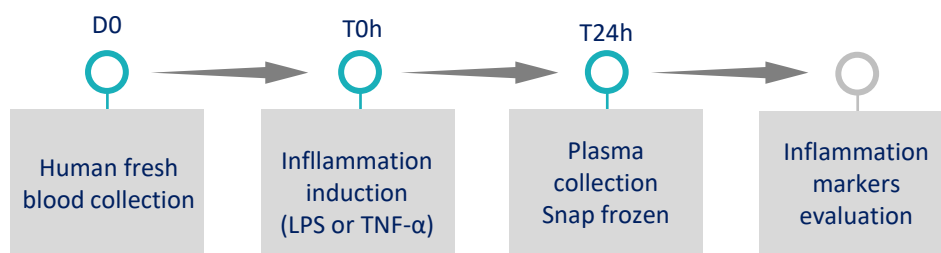

NEPHRIX
Biosolutions

Our Inflammation Assay provides a physiologically relevant platform to assess immune activation directly in freshly collected human blood. This model offers a highly predictive insight into the human inflammatory response. Via a precise evaluation of cytokines release, NEPHRIX Biosolutions facilitates the evaluation of the immunomodulatory therapeutic candidates.

Assay features

- Multiplex or ELISA dosage of secreted cytokines
- PBMC or Whole blood to preserve cell-plasma interactions
- Rapid turnaround and cost-effective

Study design

Multi-parameters assessment availability:

- + Hemocompatibility assay
- + PBMCs focus study
- + Cell sorting and identification
